Assessment of Medical Device Competency

Medical Device:

Giraffe Shuttle (Docking Station) and Stand-alone Resuscitation System

Level of Risk (consequence x likelihood) (4x4 =16) High

Competency statement:

The practitioner has been observed as competent in the use of Giraffe Shuttle (Docking Station) and Stand-alone Resuscitation System on the date/s recorded below.

Underpinning Knowledge (including relevant policies and procedures):

Underpinning knowledge and understanding required:	**Achievement**	
	Date	**Signature of assessor**
Demonstrates an understanding of the functions, uses and limitations for the device		
Demonstrates an understanding of the procedure for reporting faults associated with the device		
Demonstrates an understanding of the procedure for reporting adverse events associated with the device		
Policies and procedures		
Demonstrates a working knowledge of national polices and guidelines including: • NDHT policy for the training and Assessment of Competency for using Medical Devices • NDHT policy for reporting equipment if faulty • NMC Code of Professional Conduct • NDHT Infection Control Policy • Moving and Handling Policy Further information in device Manual on SCBU or at: http://www3.gehealthcare.co.uk/		

Assessment of competency:

Operation of Device	Achievement	
	Date	Signature of assessor
Ensures device is suitable for use and within its service date		
Undertake appropriate pre-use checks - Demonstrate knowledge of checking the device is serviced, clean, functional and safe to use		
Setting up device **Giraffe Shuttle** - Demonstrates knowledge of how to check the oxygen/air cylinders and how to order new oxygen/air cylinders if needed, - Demonstrates how to check the battery of Giraffe Shuttle and knows what to do if it is empty/has developed a fault. **Stand-alone Resuscitation System** - Aware of how to change suction settings using control dial using pressure gauge, - Demonstrates how to check PIP/PEEP settings,		
Use of device **Giraffe Shuttle** Demonstrates knowledge of how to: • Turn power of shuttle on • Attach device to Giraffe Omnibed/ Panda – lock in place • Plug in Giraffe OmniBed/Panda electrical supply to Giraffe Shuttle • Manoeuvre safely as per manual handling risk assessment **Stand-alone Resuscitation System** • Aware of all switches and dials and their functions, • Demonstrates how to adjust PIP/PEEP setting using flow meter control dials, with awareness PIP override release, • Awareness and knowledge of how to use O2/Air blender appropriately in resuscitation, • Demonstrates how to swap use from Neonatal T piece to ambubag • Knows how to swap and change gas supply from Panda to Shuttle when necessary		

Actions to be taken to monitor or check the device whilst in use		
Undertakes cleaning and decontamination as per trust and manufacturer guidelines - How to clean suction and tubing - Demonstrates how to clean and change T Piece tubing after use		

Signatures on Completion:

Signature of Practitioner:	
Print name:	Position:
Date:	
Signature of Assessor:	
Print name:	Position:
Date:	

Initial assessments must always be verified by a competent practitioner by observed practice.

On completion of this document: The original copy should be retained by the employee for their portfolio; one copy should be retained in the area specific competency log folder in your workplace and one copy sent to workforce development for logging on STAR.
