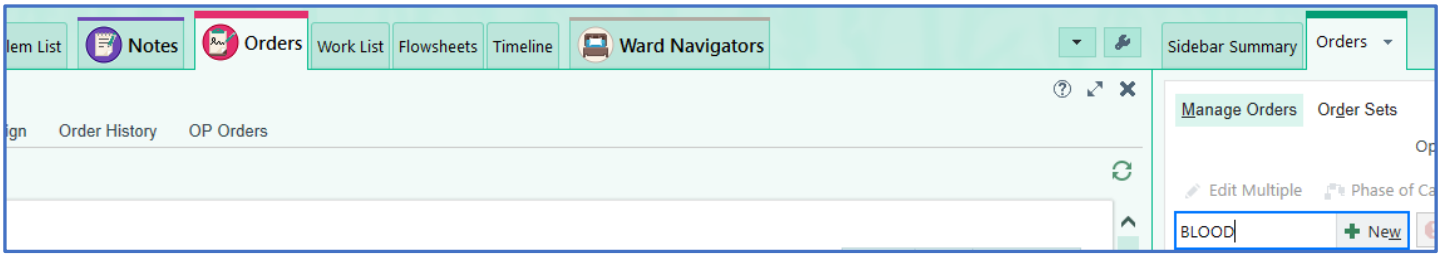
Blood Transfusion – How to order blood components in EPIC

Ordering blood components (red cells, platelets, FFP and cryoprecipitate)

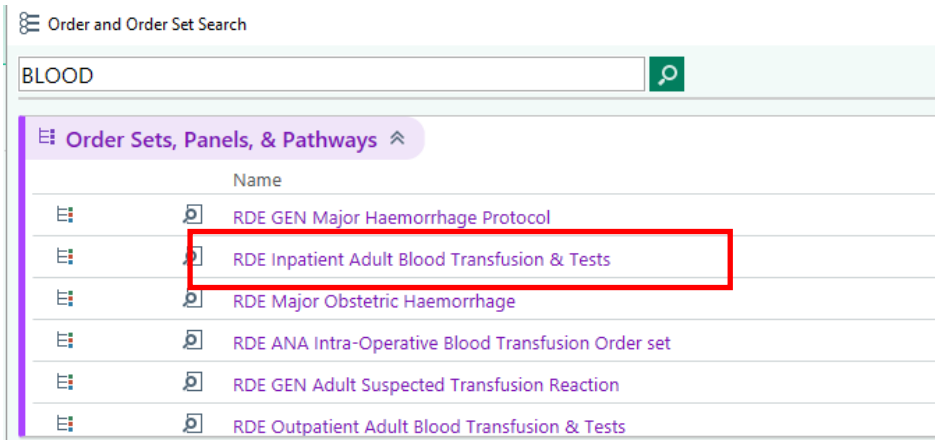
Go to the ORDERS tab and write BLOOD or TRANSFUSION in the new orders box



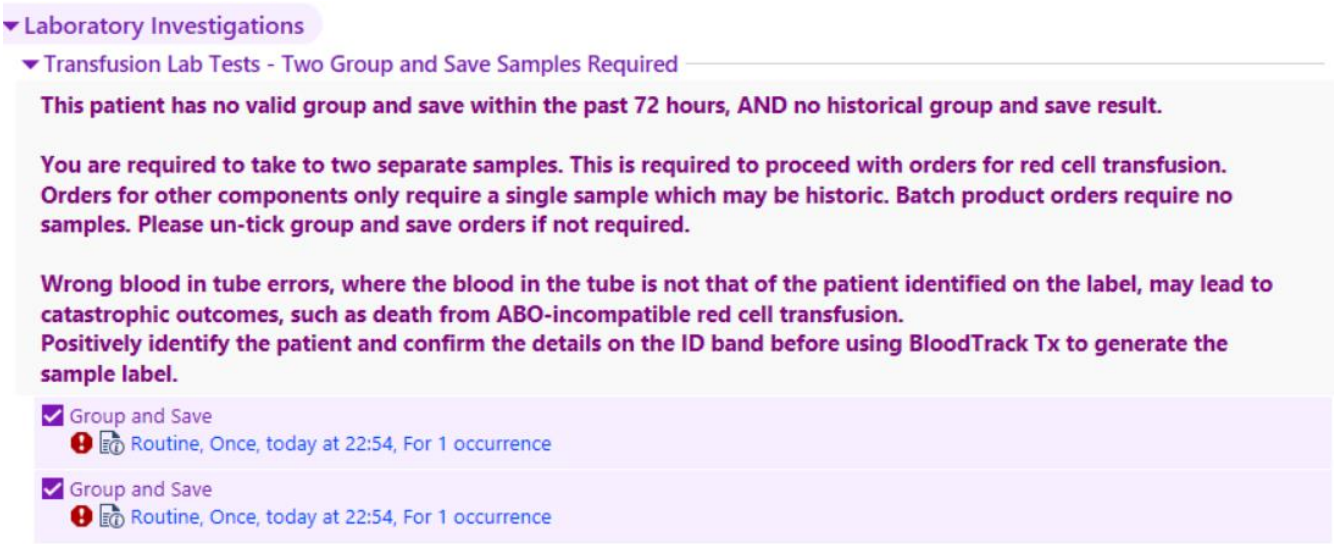
All blood transfusion related order sets appear, select the correct one:

For **inpatients,** select **NDDH/RDE Inpatient Adult Blood Transfusion & Transfusion Blood Tests**

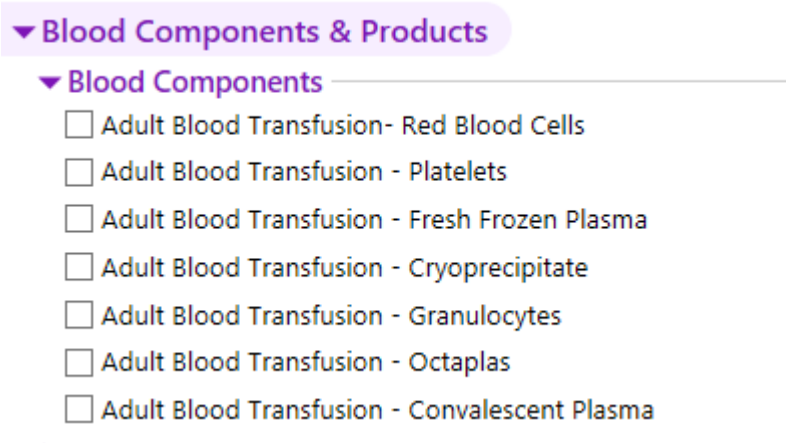
For **outpatients,** select **NDDH/RDE Outpatient Adult Blood Transfusion & Transfusion Blood Tests**



Once you have opened the order set, you may be prompted to order one or more group and save request(s) dependent on the presence of a patient's historical sample.

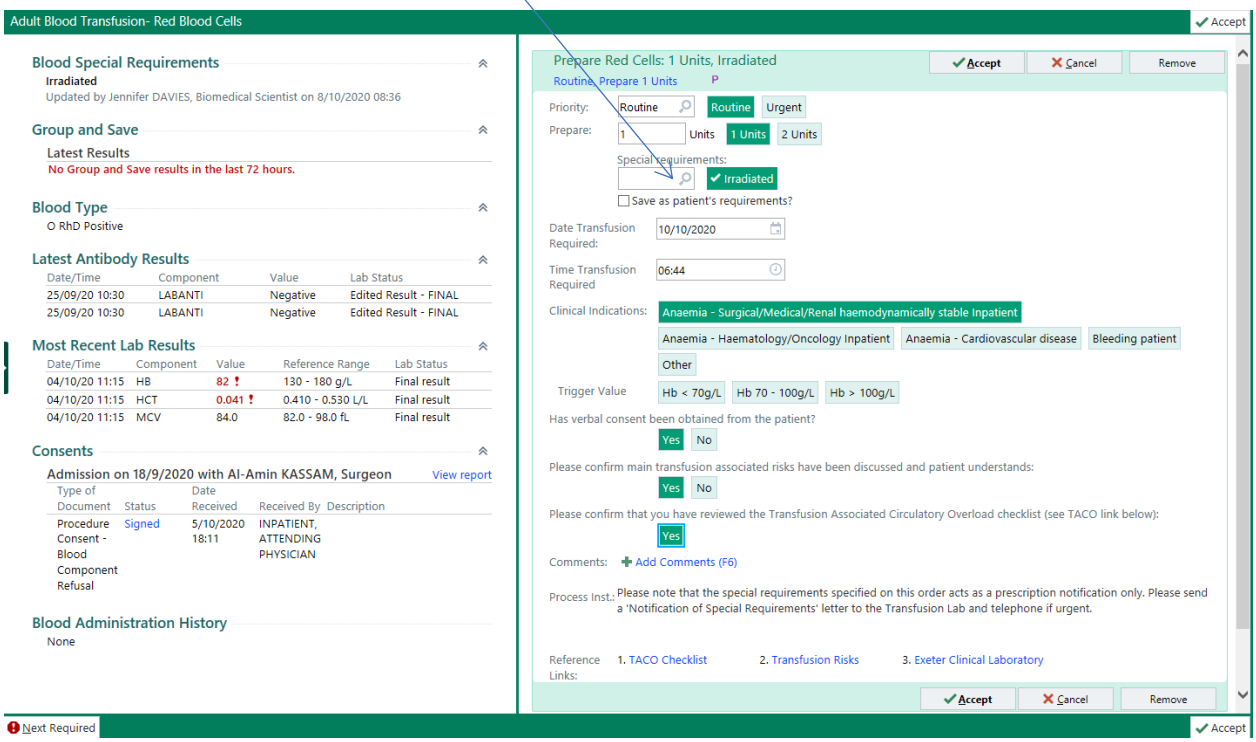


Component orders for non-major haemorrhage and non-trauma events are available in the Blood Components & Products drop down box below the group and save order

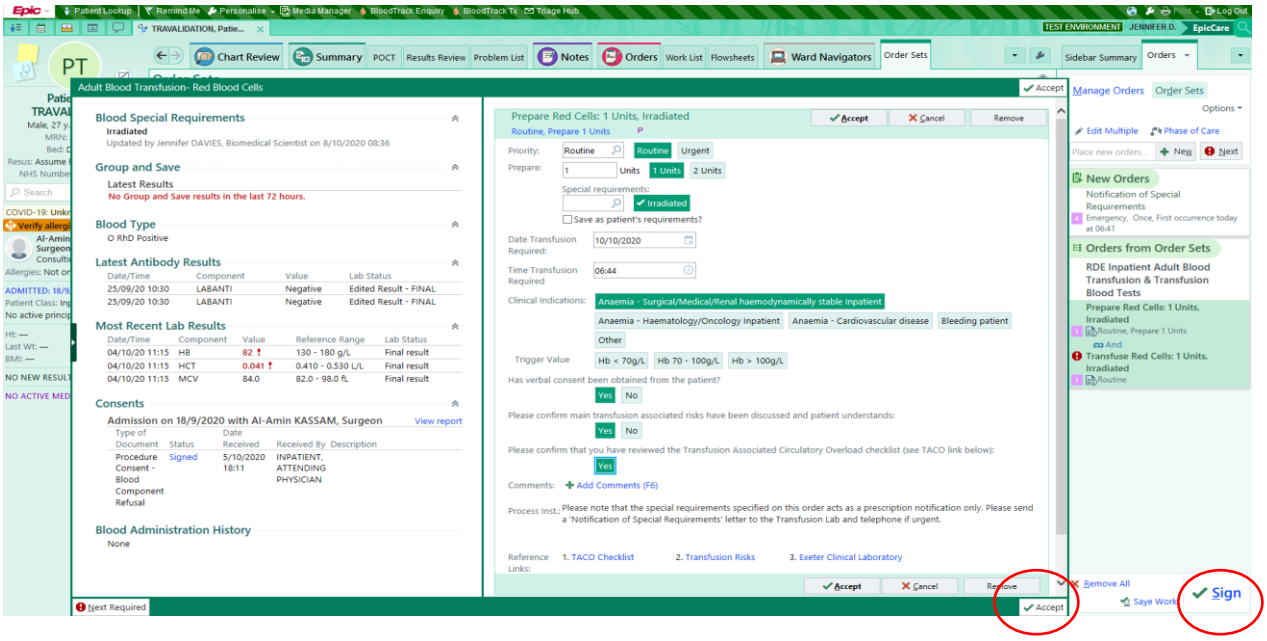


Click on the order and then fill out the required details on the request. Orders for red cells for non major haemorrhage events must have an FBC result within the previous 24 hours, if you have not performed an FBC the system will prompt you to do this. Hyperlinks to guidance are provided at the bottom of the order and laboratory results are displayed in the left hand side bar.

If your patient has special requirements, make sure that these are noted here so that they appear in the prescription for the nursing staff. A special requirement notification should be completed if this is a new requirement (click here to see further information on recording a notification). If the patient already has a notification in the EPIC record, the requirements will appear automatically in the component order screen.



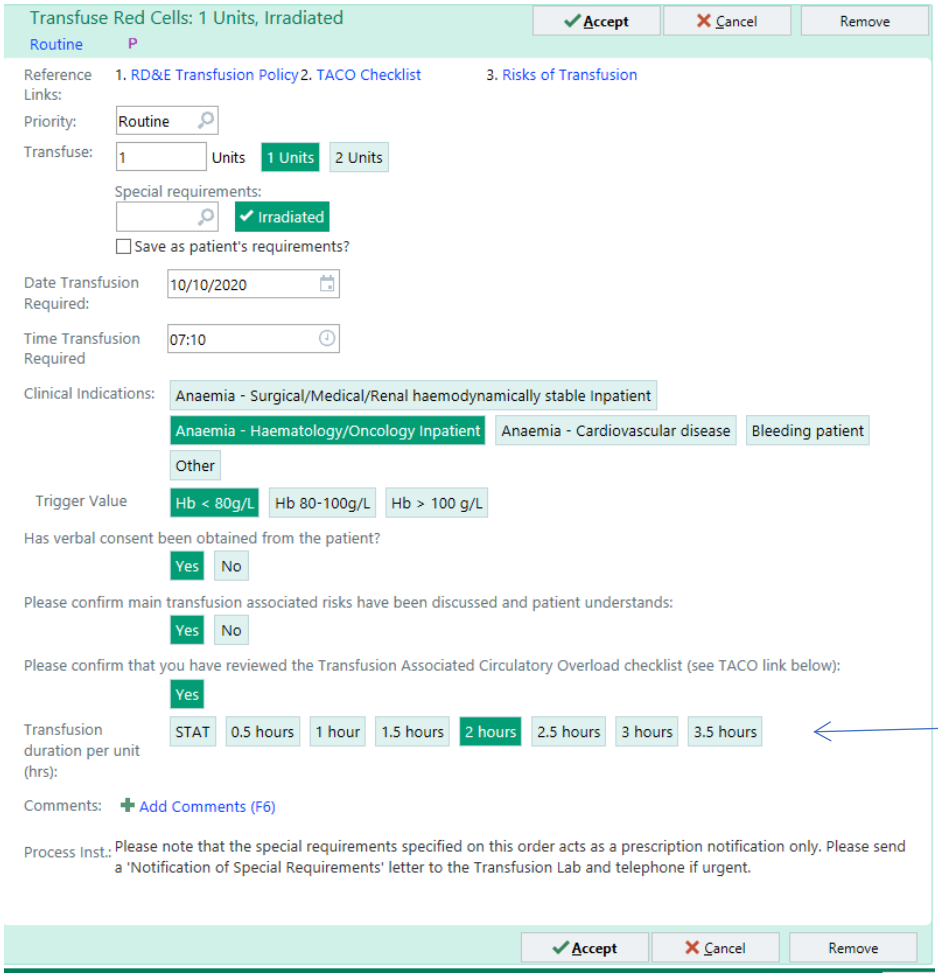
When you have completed all the required clinical indications, click accept and Sign;



If your order is urgent phone the laboratory on RDE ext.2465/2467 or bleed 227 if out of hours and NDDH phone ext. 2327 or 2370 or bleep 045 out of hours

Prescribing a blood component using the 'Transfuse Order'

The component order automatically adds the prescription or 'transfuse order'. If you are ordering and prescribing at the same time the relevant information from the order will be populated in the prescription.

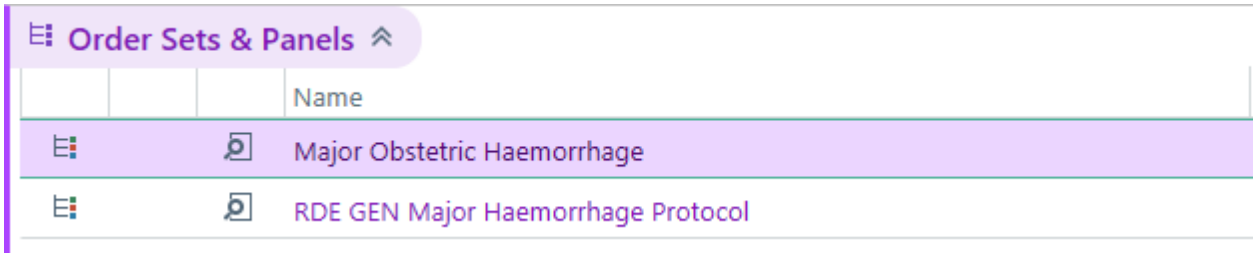


Select the duration of the transfusion by clicking the appropriate box

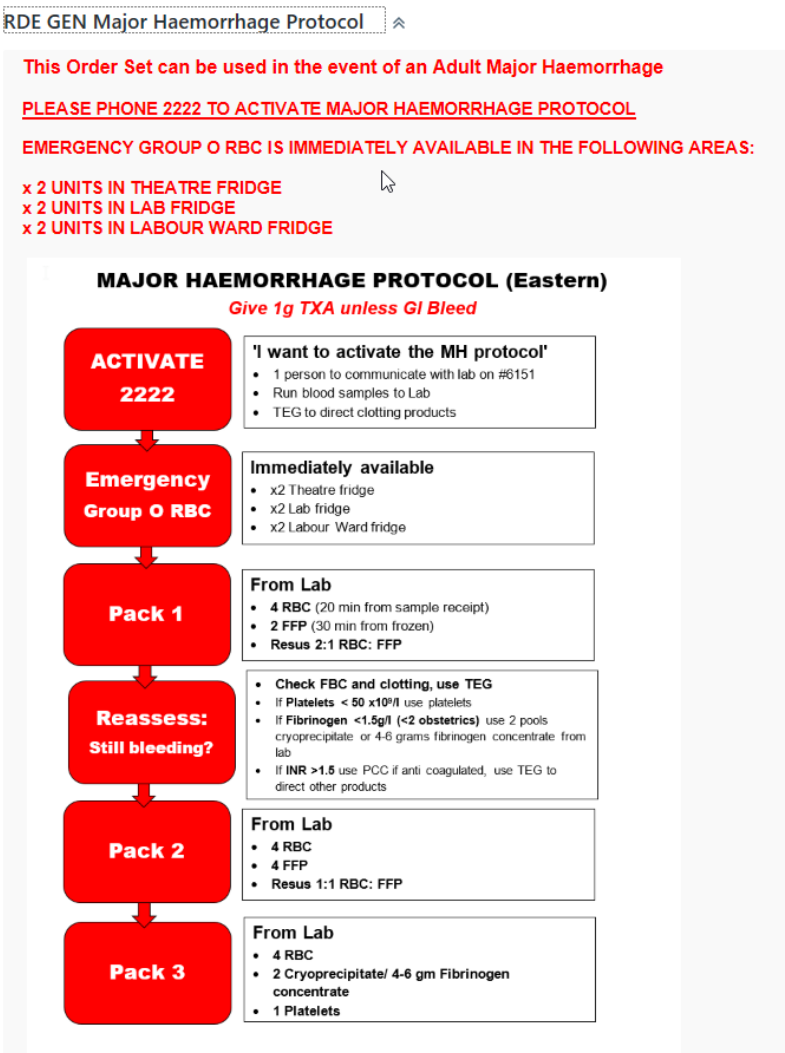
Ordering Blood Components for Major Haemorrhage

Note: Although these screenshots show RDE examples, there is a very similar NDH version

Go again to the orders tab and write ‘blood’ in the new orders box, now select the relevant major haemorrhage order set.



This contains preselected orders including haematology tests and component orders for blood tests and components



Full Blood Count (FBC)
Once, today at 07:18, For 1 occurrence
Please provide relevant clinical details: MHP
Blood, Venous

Coagulation Tests
Once, today at 07:18, For 1 occurrence
Please indicate why a Coagulation Screen is required for this patient? Major haemorrhage/obstetric bleed/Trauma Code Red
Is the patient on any anti-coagulant? No
Please provide relevant clinical details: MHP
Blood, Venous

Clauss Fibrinogen
Once, today at 07:18, For 1 occurrence
Please provide relevant clinical details: MHP
Blood, Venous

Renal Function Test (including Chloride)
Once, today at 07:18, For 1 occurrence
Please provide relevant clinical details: MHP
Blood, Venous

Major Haemorrhage Transfusion Orders

Emergency PCC

PCC is an emergency product and can be sourced immediately (without going through the blood bank or on-call Haematologist) by going to the Main Theatres batch fridge or the Laboratory fridge.
For PCC sourced immediately from fridge, select PCC - Emergency Retrieval Order below
For further PCC requests, place PCC - Follow-Up Dose Order below and **phone the Transfusion Lab on x2467**
- PCC Guidance

PCC Products

Major Haemorrhage Blood Products

PACK 1

Massive Transfusion Protocol
Emergency

And

Prepare Red Cells: 4 Units, Irradiated
Emergency, Prepare 4 Units

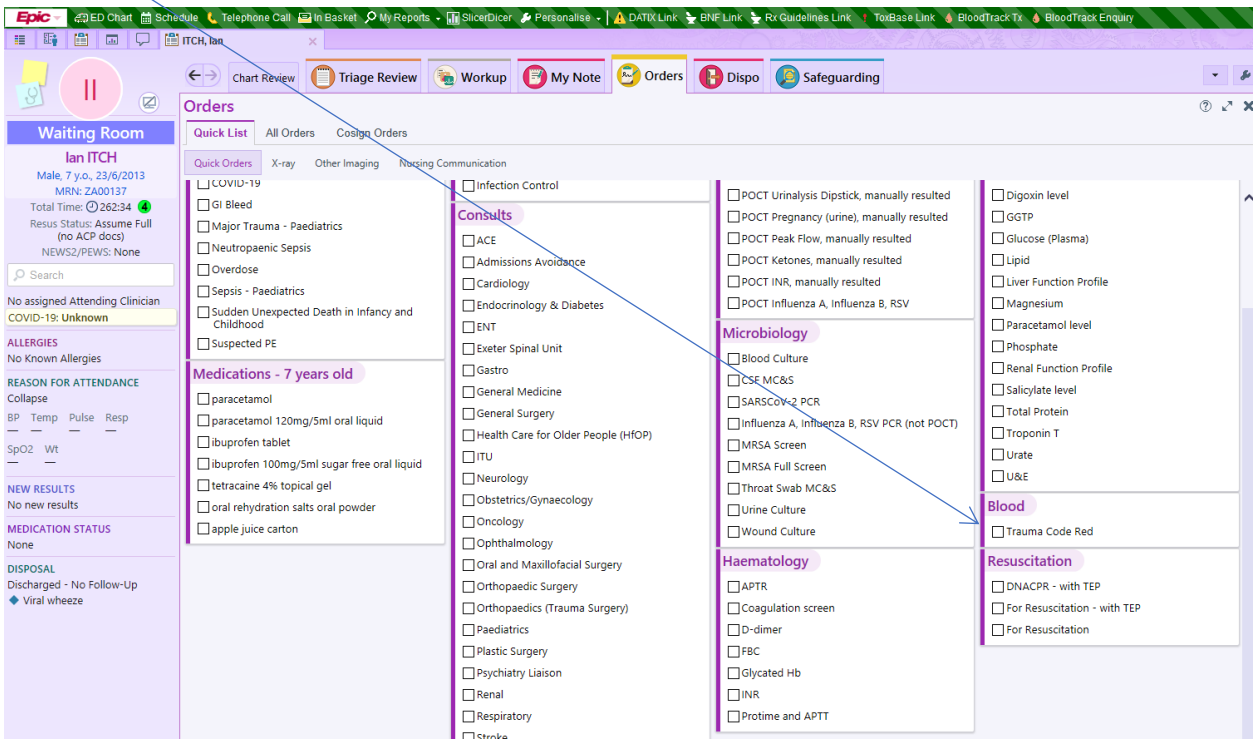
And

Prepare Fresh Frozen Plasma: 2 Units
Emergency, Prepare 2 Units

Click ‘sign’ to complete the order. Always phone the laboratory in accordance with the major haemorrhage protocol.

Ordering components for Trauma Code Red (Wonford Ed only)

TCR orders can only be accessed when logged into EPIC in the Wonford ED, select trauma code red from the orders screen



Trauma Code Red Pack 1

Trauma Code Red — Remove
Urgent P

And

Prepare Red Cells: 2 Units — Accept | Cancel | Link Order | Remove
Urgent, Prepare 2 Units P

Priority: Urgent — Routine | Urgent

Prepare: 2 Units — 1 Units | 2 Units

Special requirements:

Save as patient's requirements?

Major Haemorrhage Protocol: Yes | No

Date Transfusion Required: 10/10/2020

Time Transfusion Required: 11:30

Clinical Indications: Anaemia - Surgical/Medical/Renal haemodynamically stable Inpatient | Anaemia - Haematology/Oncology Inpatient | Anaemia - Cardiovascular disease | Bleeding patient | Other

Type of bleed: PV bleed | GI bleed | Epistaxis | Other

Please specify: Trauma Code Red

Has verbal consent been obtained from the patient? Yes | No

Has a best interest decision to transfuse been made? Yes | No

Has a member of the patient's family, a relative or carer been informed? Please specify who in the box below: Yes | No | Trauma Code Red

Please confirm main transfusion associated risks have been discussed and patient understands: Yes | No

Accept

The order set will appear, press accept and sign to complete the order. Always contact the laboratory by telephone to alert the laboratory staff that a TCR order is required.
